

Busby wins long-term study award

Ryan Busby received an award from the U.S. Army Engineer Research and Development Center (ERDC) that enables one year of off-site advanced study. Busby, a researcher at ERDC's Construction Engineering Research Laboratory, will attend the Colorado State University Colleges of Natural Resources and Natural Sciences to pursue a doctorate in ecology. He will study rhizosphere ecology and rangeland ecosystem science to gain expertise in the biochemical processes and plant-microbe interactions that impact plant communities. This knowledge will enhance his ongoing and future research to sustain Army training lands.
